

Week 2: Frame It as Cases

Voice Card

Direct, warm, plain, specific, no buzzwords. Short sentences. No "passionate," "results-driven," or "dynamic." A few words that sound like me: methodical, honest, curious. Use my real experiences, decisions, and lessons learned. Don't invent achievements or make my work sound more impressive than it was. If information is missing, ask me questions before drafting. If a line sounds like a generic AI bio, rewrite it the way a real person would say it to a friend.

Case Study

FlyRank AI Engineering Internship

The Problem

I joined the FlyRank AI Engineering Internship because I wanted to learn machine learning and eventually apply it to practical mathematical problems. I knew that reading books or watching videos would not be enough. I believed I needed to work on real projects to understand how machine learning works in practice.

What I Did and Decided

I started by learning how machine learning notebooks are structured and getting familiar with how a model and its workflow are organized. In the second week, I chose a learning lane that matched my current experience because I was completely new to machine learning. When I first opened the notebooks, I felt lost because I did not understand the terminology or what each section was doing. To work through this, I used AI assistants to explain concepts, machine learning terms, and notebook content step by step so I could build my understanding instead of simply looking for answers.

What Came of It

I am still at the beginning of my machine learning journey, so my progress is small but real. I can now understand parts of a machine learning notebook that I could not understand before, although I am still building confidence with Python code and machine learning concepts. One of the biggest improvements has been learning how to use AI as a learning partner to understand unfamiliar technical topics instead of feeling stuck.

What I Would Do Differently Next Time

I would worry less about understanding everything immediately and focus on learning one concept at a time.

Portfolio Bio

Option 1

I have an MS in Mathematics and a background in numerical analysis and scientific computing. I am currently building my skills in Python, machine learning, and AI through hands-on projects as I prepare for research and engineering opportunities.

Contact Prompt

Interested in discussing AI, machine learning, or research? I'd be happy to connect.

Option 2

I study how mathematics and machine learning can work together to solve practical problems. Right now, I am learning AI engineering through real projects while building a strong foundation in Python and machine learning.

Contact Prompt

If you'd like to talk about AI, mathematics, or collaboration, feel free to get in touch.

Option 3

I am an MS Mathematics graduate learning machine learning by working on real projects and building practical programming skills. My goal is to apply mathematical thinking to AI and scientific computing.

Contact Prompt

Feel free to reach out if you'd like to connect or discuss opportunities.

Before / After Example

Generic AI Version

I am a results-driven professional passionate about AI and innovation, dedicated to delivering impactful solutions while continuously expanding my technical expertise.

My Edited Version

I have an MS in Mathematics and I am learning machine learning through real projects so I can apply it to practical mathematical problems. Right now, I am building my Python and AI skills through the FlyRank AI Engineering Internship.

Audience

Recruiters seeking AI/ML interns or entry-level candidates.
